

## Biography

---

**Name :** Roland Scherer, MD

**Speciality:** Colorectal Surgery

Dr. Roland Scherer is a European specialist in coloproctology and deals with all diseases of the intestine, rectum and pelvic floor. Minimally invasive and conventional surgery for colorectal and bowel cancer are among the focal points of Dr. med. Scherer and his department.

But also diseases of the rectum, such as hemorrhoids and anal fissures and consequences of pelvic floor diseases are treated successfully. In cooperation with the internal department of the hospital, the chief physician is also the contact person for inflammatory bowel disease.

Dr. Scherer has developed and internationally published various surgical procedures in the surgery of anal and rectovaginal fistulas and rectal prolapse. Not only patients benefit from this, but also those who want to learn it: the center is a national and international training center for bowel and pelvic floor operations.
